## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 6-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thakur et al. (US 5,712,186) in further view of Kim (US 3,853,496).

Thakur discloses the steps of:

oxidizing the silicon substrate locally at a first temperature (316, fig. 3a) of at least above 1100 degrees centigrade through the patterned silicon nitride mask layer to form silicon oxide dielectric field oxide (FOX) isolation layers;

oxidizing the silicon substrate further at a second temperature (316, fig. 3c) no greater than 1100 degrees centigrade (col. 5, ln. 19 – ln. 50).

Thakur discloses the claimed invention except the limitation of substrate is single crystalline silicon of (100) crystal orientation.

However, Kim discloses a silicon wafer of (100) orientation. A substrate of this orientation provides for oxidation to occur easily.
